DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Stern et al. (U.S. Patent No. 4,799,253).

Regarding claims 1, 4-8, 10-13, Stern et al. teaches a transmit-receive system on board a satellite for a telecommunication system within a region covered by that system, wherein said region includes isolated areas (see Fig. 1), said system receives calls from any area and transmits them to the same area or another area using routing means, said system includes means for combining the signals from said isolated areas into groups (e.g. group X and group M), routing is effected between groups and each group is allocated all of the communication resources of said region (Fig. 1; Col. 5, lines 15-27).

Regarding claim 2, Stern et al. teaches the system as in claim 1 wherein routing means are hardwired (e.g. trunk 150, Fig. 1).

Regarding claim 3, Stern et al. teaches the system as in claim 1 wherein said areas are allocated to said groups in such a manner that the traffic is substantially the same from one group to another (Fig. 1; Col. 5, lines 15-27).

Regarding claim 9, Stern et al. teaches the system as in claim 8 wherein said resources allocated to said groups for interconnecting them include frequency bands (col. 4, line 39).
